

# 7839 Awesome Deep Web Links List [Uncensored Table]

Our team has amassed one of the biggest Deep Web links list out there (listed below).

We took it one step further by checking them out so we could categorize them, record the name of the site, give a description of the site, record if it was online or offline or dead, what they sell and we even got screen shots.

One of the hardest things about the Deep Web is that it is almost impossible to search for anything as search engines do not work there, so you need resources like this to find what you are looking for.

It is estimated that 90% of all internet data and websites are hidden from search engine indexing, this area of the internet is known as the Deep Web.

Then there is another smaller sub-set of the Deep Web that consists of darknet markets, and sites about drugs, pornography, weapons, assassins, counterfeit and forgeries and hacking etc. This section is called the Dark Web

There is also a large section of it for whistle blowers to come forward and expose people, organizations and governments for wrong doings.

The Deep Web is a very colorful and diverse place. One thing is for sure though – you have to have a strong stomach if you want to browse. There are things there that once seen can't be unseen... So thread carefully!

Just remember, you need Tor to access the links in this .onion link list and Tor alone is not as secure as you think. If you fall into the false sense of security and think you are safe from being tracked and monitored, then you are sadly mistaken.

This has been proven multiple times recently with the FBI using an American university to hijack the Tor network and catch tons of darknet market users. The FBI also hacked “Play Pen” and then used malware to identify the admin and users of the site so they could arrest them. Regardless of how fucked up sites like “Play Pen” are, it shows that the FEDS can do this to any site on the darkweb.

By using a good VPN along with Tor you will add an extra layer of encryption and anonymity making it virtually impossible to trace you. Using a good VPN will mean you are sharing an IP with hundreds, if not thousands of other so even if tor was cracked and the

real IP found then it would be the VPN IP and they couldn't tell who it is.

We found a good site that tests and rates VPN's used for Tor here: <https://topvpnsoftware.com>

If you are currently not on Tor browser you will need, close all your programs accessing the internet, turn your VPN on, open tor and come back here.

You can sort by any of the columns via the arrow icon or use the search box to be more precise.

Note: We do not encourage or condone any illegal activity, this is for mere educational purposes only.
